COVID-19 (SARS-CoV-2) Antibody Test Consent Form Part Two

Name: \_\_\_\_\_

Date of Birth: \_\_\_\_\_

Thank you for participating in the collection of blood for antibody testing for COVID-19. Please read the following information about the testing of the blood that is being collected today:

This test is an enzyme-linked immunosorbent assay, (ELISA) test. It measures antibodies in your blood.

This testing has not been reviewed or authorized by the FDA.

This test is not to be used for diagnostic purposes nor is it intended for any patient care decisions. Results of this blood test do not rule out COVID-19 (SARS-CoV-2) infection, particularly in those who have been in contact with the virus.

If you test NEGATIVE: You likely have not been infected by COVID-19 (SARS-CoV-2). It is also possible that you are currently infected and have not yet produced significant antibodies. It is advised to repeat this test in 2 weeks.

If you test POSITIVE: You have been infected by COVID-19 (SARS-CoV-2) or a similar non-SARS-CoV-2 coronavirus strain, such as coronavirus HKU1, NL63, OC43, or 229E, either symptomatically or asymptotically. It is unknown whether the presence of antibodies gives you immunity, and it is unknown how long these antibodies will last. The current available data seems to suggest that antibodies may remain in the body for 6-8 weeks. We strongly recommend that you retest in 8 weeks to determine if antibodies are still present.

Results from antibody testing should not be used as the basis to diagnose or exclude COVID-19 (SARS-CoV-2) infection or to inform anyone of infection status current or past. It is vital to the health of our community and yourself that you continue to follow social distancing orders.
